For Access to Clean Water: well:fair and thyssenkrupp nucera Launch Partnership

- Dortmund-based non-governmental organization (NGO) and electrolysis specialist to support access to clean water, sanitation, and hygiene (WASH) in East Africa
- The partnership is an important part of thyssenkrupp nucera's commitment to corporate responsibility
- Collaboration will result in the construction of new wells in Ethiopia and Tanzania

Dortmund, September 16, 2025 – Two Dortmund-based institutions are joining forces: well:fair and thyssenkrupp nucera have agreed on a two-year partnership contributing to so-called WASH projects, i.e., projects focusing on access to clean water, sanitation, and hygiene (WASH) in East Africa. thyssenkrupp nucera, a global leader in electrolysis technologies, is supporting the well:fair projects with an annual donation of EUR 25,000.

well:fair, formerly the Neven Subotić Foundation, has implemented more than 500 WASH projects in Ethiopia, Kenya, and Tanzania since 2012. In a region where approximately half the population lacks access to clean water, the organization helps more than 400,000 people by providing wells and sanitary facilities in communities and schools there. With the support of thyssenkrupp nucera, well:fair will build two wells in Ethiopia and Tanzania, among other things.

“Access to clean water is essential for health, education, and economic development. This is where our projects come in. At thyssenkrupp nucera, we have a strong partner who shares our values and comes directly from our neighborhood,” says Neven Subotić, founder and CEO of well:fair. “Together, we can initiate further projects and reach even more people.”

“We are very aware of our responsibility as a global company – and we want to live up to that responsibility. Water plays an important role in our technology. WASH projects are therefore the ideal approach for us to make our contribution,” says Tuğçe Uysal, Head of ESG & Sustainability at thyssenkrupp nucera. “With well:fair, we have the right partner at our side: based in Dortmund, well-

connected in the project regions, and highly transparent. Together, we are working to provide access to clean water where it is most urgently needed.”

The partnership with well:fair is a key component of thyssenkrupp nucera's commitment to sustainability and its own corporate social responsibility. The materiality analysis underlying the sustainability activities has identified water and the responsible use of scarce resources as key issues for the stakeholders of the electrolysis specialist. As part of its collaboration with well:fair, thyssenkrupp nucera will raise awareness of the issue among its employees, involve them in the projects, and enable them to launch their own social initiatives.

About well:fair:

well:fair is a non-profit foundation based in Germany, founded in 2012 by Neven Subotić in Dortmund. Since then, it has been promoting access to clean drinking water, sanitation, and hygiene (WASH) in East Africa. Together with long-standing local partner organizations, the foundation implements projects in Kenya, Tanzania, and Ethiopia. These include wells and sanitation facilities in communities and schools in rural regions, as well as educational programs in Germany that strengthen civil society engagement. Since its founding, well:fair has enabled long-term access to clean drinking water and sanitation for over 400,000 people.

About thyssenkrupp nucera:

thyssenkrupp nucera offers world-leading technologies for highly efficient electrolysis plants. The company has extensive expertise in the design, procurement, and construction of electrochemical plants. Its track record includes more than 600 successfully installed projects with a total capacity of more than 10 gigawatts. thyssenkrupp nucera's chlor-alkali electrolysis plants allow significant savings in construction costs and offer fast, simple, and cost-effective assembly. thyssenkrupp nucera successfully made an IPO in July 2023 and is a member of the SDAX of the Frankfurt Stock Exchange.
